

**Have you had a stroke?**

**Can you hold a glass but  
find it difficult to let go?**

**We are looking for volunteers to take  
part in our study.**

Participation in the study will involve a single session of injections into your arm, followed by 10 sessions of physiotherapy over 4 weeks, and 3 more assessments after this.

Not everyone will be suitable for this particular treatment. The final decision on eligibility will be made by a multi-disciplinary healthcare team.

All tests and therapy will take place at the National Hospital for Neurology and Neurosurgery. We will reimburse you for travel expenses.

If you are interested in taking part, would like more detailed information leaflets or would like to ask questions without committing to anything, then please contact:
